

During Robs two month stay I will be giving regular updates of the progress of the building work. It is very exciting and the fulfilment of a 4 year vision so thank you again to all of you who have given in so many ways to make this possible. These pictures and updates will also be on our face book page. Every blessing Jacqui

Working on the road and arrival of the culverts to divert water from the land and enable heavy vehicle access. The villagers struggle on these roads when the rains come so this will help them.

We are employing 14 men each day to get the work done as quickly as possible. The land was dug to a deep level with machinery. The foundations were dug by hand by the villagers ready for the concrete

Filling in with rubble and concrete for the brick work to the foundation level as it starts to take shape, the Ndejje Village is in the background and will benefit from the Medical Centre and Community Centre

We give God the Glory for this progress
